Phase 07

Solution Design and Implementation Planning

07

PHASE IN MODEL

Advance only options that pass the strategic decision gate.

Project / team: _____ **Community / setting:** _____ **Date:** _____

Record the gate decision

For each option, test causal, opportunity, feasibility, and technology fit.

Check privacy, accessibility, trust, equity, and other safeguards; advance, revise, or pause.

Design coordinated actions

What combination of access, affordability, skills, support, policy, or service changes is needed?

How will participants experience the complete service rather than isolated components?

Assign delivery and governance

Who owns each action, partnership, approval, budget, and escalation path?

What milestones and dependencies determine the sequence?

Pilot and protect participants

What will be tested first, with whom, and for how long?

How will you detect harm, gather feedback, and revise before expansion?

Phase output: What will you carry forward to the next decision or phase?
